Telecom Company- Project Administration and Controls for Enterprise (PACE)

Tech Agile
Innovate and Excel

Business Scenario:

The lack of an integrated solution to address Program Management, Project Scheduling, Milestone Tracking, Project Setup and Initiation Reporting, Change Management, Cost Control and Budget Management capabilities results in significant inefficiency in the market, regional, and national resources who execute on the deployment and upgrades of network elements.

PACE will support national standards and provide the flexibility needed at the regional and market level to manage all project types.

It will support current data integrity initiatives and allow for consolidated management and progress reporting.

After developing the company will be able to mitigate risk associated with the problems created by the lack of a functionally robust solution.

Application consolidation and improved program and project management was the need.

Tech Agile Solution:

Tech Agile's Improved program and project management Solution

Technologies:

Proliance (.Net based product), .Net Web Services,
